INNOVATIVE
TECHNICAL SOLUTIONS

SHOWER LINE N

Improved waterproofing and drainage system for built-in shower trays with wall drain, featuring an innovative magnetic fixing system between the drain and the external cover. This solution is designed to conceal the drainage system as much as possible, while ensuring perfect waterproofing of walls and floors without interrupting the visual continuity of the ceramic tiles.

Available in three sizes and designed for bathrooms with dry walls; it can also be installed on brick partition walls. For professional use.

MAIN FEATURES

Perfect magnetic anchoring of the cover to the drain.

Drainage hidden from view.

Drainage chamber with a perimeter waterproof sheet compatible with the direct installation of ceramic tiles.

Easy cleaning and high resistance to household detergents.

RECOMMENDED APPLICATIONS

Built-in shower trays waterproofed with the **imperband eco**.

SHOWER AREA

AVAILABLE SIZES

- 100383521 40 cm
- 100383522 60 cm
- 100383524 100 cm

NEW SQUARE GRATE

Butech expands its square grates collection with the **Kit imperband eco** waterproofing system, with three new finishes added to the already available **square texture black** and **square texture tileable**.

The **square brushed gold** grate is inspired by the most exclusive trends, where the use of golden elements conveys the status that only gold can offer, a detail that integrates the custom shower tray into the bathroom's style.

The **square brushed copper** grate is another new addition, developed from NOKEN's finish for its bathroom accessories, featuring a soft copper tone that sets it apart from the more standard steel and ceramic solutions. In this line, the **square brushed titanium** grate provides a metallic solution in line with the gunmetal style

RECOMMENDED APPLICATIONS

Built-in shower trays waterproofed with the **Kit imperband eco**.

SHOWER AREA

AVAILABLE OPTIONS

INSTALLATION SYSTEMS

FOR PORCELANOSA
TILES

BONDED FACADE CONCEALED CLIP

New materials require new installation systems. PORCELANOSA tiles collections with thicknesses of 8.5 mm and even 6 mm can now also be installed on bonded façades using concealed clips. By simply creating an oblique groove on the back of the tiles with an attachment supplied by Butech for the cutting machine, and inserting this new type of clip, a completely safe exterior installation can be achieved.

RECOMMENDED APPLICATIONS

Installation of 6 mm XTONE and XLIGHT ceramic slabs on exterior walls.

Installation of PORCELANOSA L-type porcelain tiles with a thickness of 8.5 mm on exterior walls.

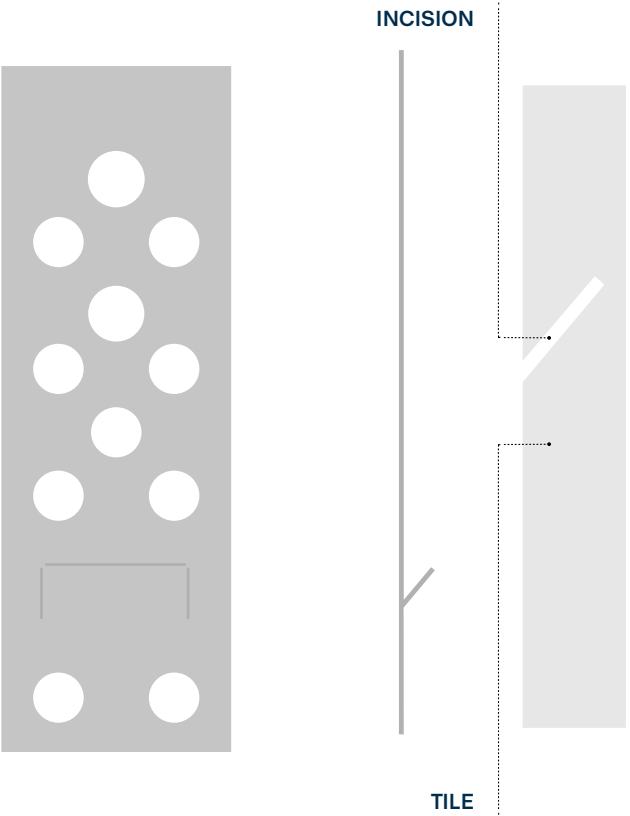

MAIN FEATURES

The number of clips per tile depends on its length and weight:

- Horizontal side ≤ 60 cm or 45 kg per tile: 1 per tile.
- Horizontal side ≤ 200 cm or 90 kg per tile: 2 clip per tile.
- Horizontal side ≤ 320 cm or 135 kg per tile: 3 clip per tile

Minimum spacing between clips: 40 cm.

INSTALLATION SYSTEMS

AVAILABLE SIZES

- 100379612 6 mm
- 100379613 8 mm

SUPER-FLEX S2 RAPID

The installation of large-format tiles, and particularly XLIGHT and XTONE, involves new challenges in achieving a reliable installation, as their dimensions can slow down the setting of the bonding material. Aware of this challenge—especially in cold and humid climates—Butech introduces **super-flex S2 rapid**, a high-performance flexible adhesive that complements its already extensive range of bonding materials. For professional use.

RECOMMENDED APPLICATIONS

Installation of large-format XTONE and XLIGHT tiles, except in hot and dry conditions.

Renovation works where rapid commissioning of ceramic tiles is required.

MAIN FEATURES

Cement-based, single component fibre reinforced adhesive.

Ready for traffic in just 3.5 hours.

Excellent flexibility with high adhesion.

AVAILABLE SIZE

100386695 Grey 25 kg

COLORSTUK RAPID N

The grout colour is essential to achieve visual continuity in any type of discontinuous wall or floor covering, especially when, as in the case of UNDORA, it has a clearly decorative character. Butech introduces three new grout colours that complete the **colorstuk rapid n** range for this new type of interior wall covering.

RECOMMENDED APPLICATIONS

- UNDORA.
- XTONE, XLIGHT and any PORCELANOSA tile.
- Tile joints up to 15 mm.
- Indoor and outdoors.
- Pools and wet rooms.

MAIN FEATURES

- Cement-based, single-component coloured mortar.
- Fine-textured mortar for grouting tile joints up to 15 mm.
- Prevents efflorescence.
- Waterproof mortar.
- Anti-mould action.

AVAILABLE COLOURS

- | | |
|-----------|---------|
| 100384426 | albino |
| 100384425 | rosso 1 |
| 100384593 | rosso 2 |

The colours shown are approximate and may vary for printing reasons.

SELF-LEVELLING SPACERS 1.5MM

Changes in installation standards in some countries have eliminated 1 mm joints, establishing 1.5 mm as the minimum joint width for any standards-compliant installation. Butech responds with 1.5 mm self-levelling spacers, allowing joint widths to be reduced in applications where 2 mm spacers were previously required. Manufactured by PORCELANOSA using recycled plastic.

RECOMMENDED APPLICATIONS

Indoor floors and walls with minimum joint widths.

Wall and floor tiles.

XLIGHT and **XTONE** large format tiles.

MAIN FEATURES

40% recycled plastic content.

Ensures tiles remain perfectly level.

Prevents tiles from moving due to laying errors or due to mortar setting.

Reduces retouching and laying time.

AVAILABLE SIZES

100386616	1.5mm	100 units
100386596	1.5mm	300 units
100386631	1.5mm	500 units

PORCELANOSA

PRO-PART BRUSHED BRASS

A new profile finish created to define the latest trends in bathroom design. The exclusive Butech **Brushed Brass** stands out for its innovative and sophisticated character, blending seamlessly with the matching NOKEN finish in taps, washbasins, and shower columns. The result is a harmonious ensemble that enhances the space and delivers a luxurious, elegant, and timeless aesthetic.

RECOMMENDED APPLICATIONS

NOKEN Brushed Brass .

PORCELANOSA marble and solid colour wall tiles.

Tiles up to 10.5 mm thick.

Wet rooms.

AVAILABLE SIZE

100386597 Brushed Brass 8 mm 11 mm 2500 mm

BLACK & COAL COLLECTION

Profiles remain a key element in the installation of ceramic tiles. They not only protect tile edges at corners and changes of plane, but also help define spaces and, together with taps, shower columns and screens, enhance the decorative style of the bathroom. In this context, Butech introduces new profiles within the **Black / Coal** range, designed to highlight the contrast between light-coloured ceramics and black decorative accessories.

Suitable for interior floor and wall installations, these new profiles represent a further step forward in profile design and aesthetic consistency.

DECORATIVE PROFILES

AVAILABLE OPTIONS

100369840 brass 14 mm 7 mm 2500 mm
100369841 brass 25 mm 7 mm 2500 mm

PRO-PART 3 STUK

Butech introduces a new line of profiles for ceramic wall tiles, finished in the same colours as some of its best-selling grouts. A technical and decorative solution that enhances visual continuity in ceramic surfaces. Manufactured in aluminium and based on the **Pro-mate 3** profile design, they are initially available in **blanco**, **beige**, **gris** and **manhattan**.

MAIN FEATURES

- Aluminium profile with decorative application.
- 3 mm side edge with a 90° angle finish.
- Exclusive and resistant pigmentation.

RECOMMENDED APPLICATIONS

- Decorative line for wall tiles.
- Separation of ceramic tiles with different designs or sizes.
- Right angle trim for wall corners.
- Not suitable for floor applications.

MONOBATH

WHAT IS IT?

BUTECH building technology has over 20 years of experience developing products and systems that support the use of ceramics in the building industry. As part of PORCELANOSA's commitment to the industrialization of bathroom units, we are now presenting MONOBATH.

Monobath is a solution for producing completely finished bathrooms ready for installation on site that brings together the quality of finishes and expertise that characterize the PORCELANOSA Group. Our robotic assembly line further improves the quality of our bathroom units and helps us maintain control throughout the entire assembly process. Monobath is the perfect system for all types of large and medium-scale building projects such as hotels, hospitals, residential buildings and care homes although it can also be adapted to single-family projects where the highest quality standards are demanded.

PORCELANOSA OFFSITE - MONOBATH

HOW IS IT?

PORCELANOSA OFFSITE - MONOBATH

METHODOLOGY

36

Production

Porcelanosa Offsite's robotic assembly line allows for complete industrialization in the manufacturing of Monobaths, ensuring high standards of quality and precision. This advanced technology positions our industrialized bathrooms as leaders in the market. Thanks to the exclusive use of materials from the Porcelanosa Group, we manage pre-stockpiling, thus avoiding stock shortages.

Our production adapts to the specific bathroom needs in each construction project, guaranteeing a responsive and efficient response.

Finally, all our bathrooms undergo rigorous final quality tests, ensuring a superior and reliable product

Transportation

Monobaths are designed to adapt to various modes of transportation, including by road, in maritime containers, ship holds, and Ro-Ro, adjusting to their specific dimensions. To ensure their integrity during transportation, the bathrooms are perfectly packaged, heat-sealed, and strapped, ensuring their protection and preservation.

Furthermore, they are equipped with sensors that detect possible impacts during the journey, allowing for constant monitoring and ensuring their arrival in optimal conditions

Assembly

The construction company conducts a preliminary survey, essential for the proper installation of Monobaths. Porcelanosa Offsite takes responsibility for leveling and placing the Monobaths, using specialized personnel from the company to ensure precise and efficient installation.

We provide the necessary tools for proper lifting, including slings and mobile platforms, as well as tools for on-site movement, such as manual and electric pallet jacks, ensuring safe and proper handling. Additionally, we adapt to the delivery pace desired by the client on the construction site, offering flexibility and coordination with project timelines

Standardised Modular Facade

WHAT IS IT?

It is the industrialised and rationalised version of the modular façade system, based on a closed catalogue of predefined panel types, with finishing material by PORCELANOSA Group. This guarantees a consistent quality, aesthetic consistency and total control of the production process.

The system consists of façade panels manufactured entirely in the factory, organised into repeatable types —solid panels, panels with windows and corner panels— which allows for high industrial efficiency, good product quality control and fast installation on site, while maintaining the technical and aesthetic performance of the MODFACADES system.

38

FULLY FINISHED FACADES:

- _Self-supporting systems
- _Thermal insulation
- _Waterproofing
- _Sound insulation
- _Exterior finish
- _Carpentry and glass
- _Sealing from the inside

It features an EPDM joint system that facilitates expansion and alignment, preventing water ingress.

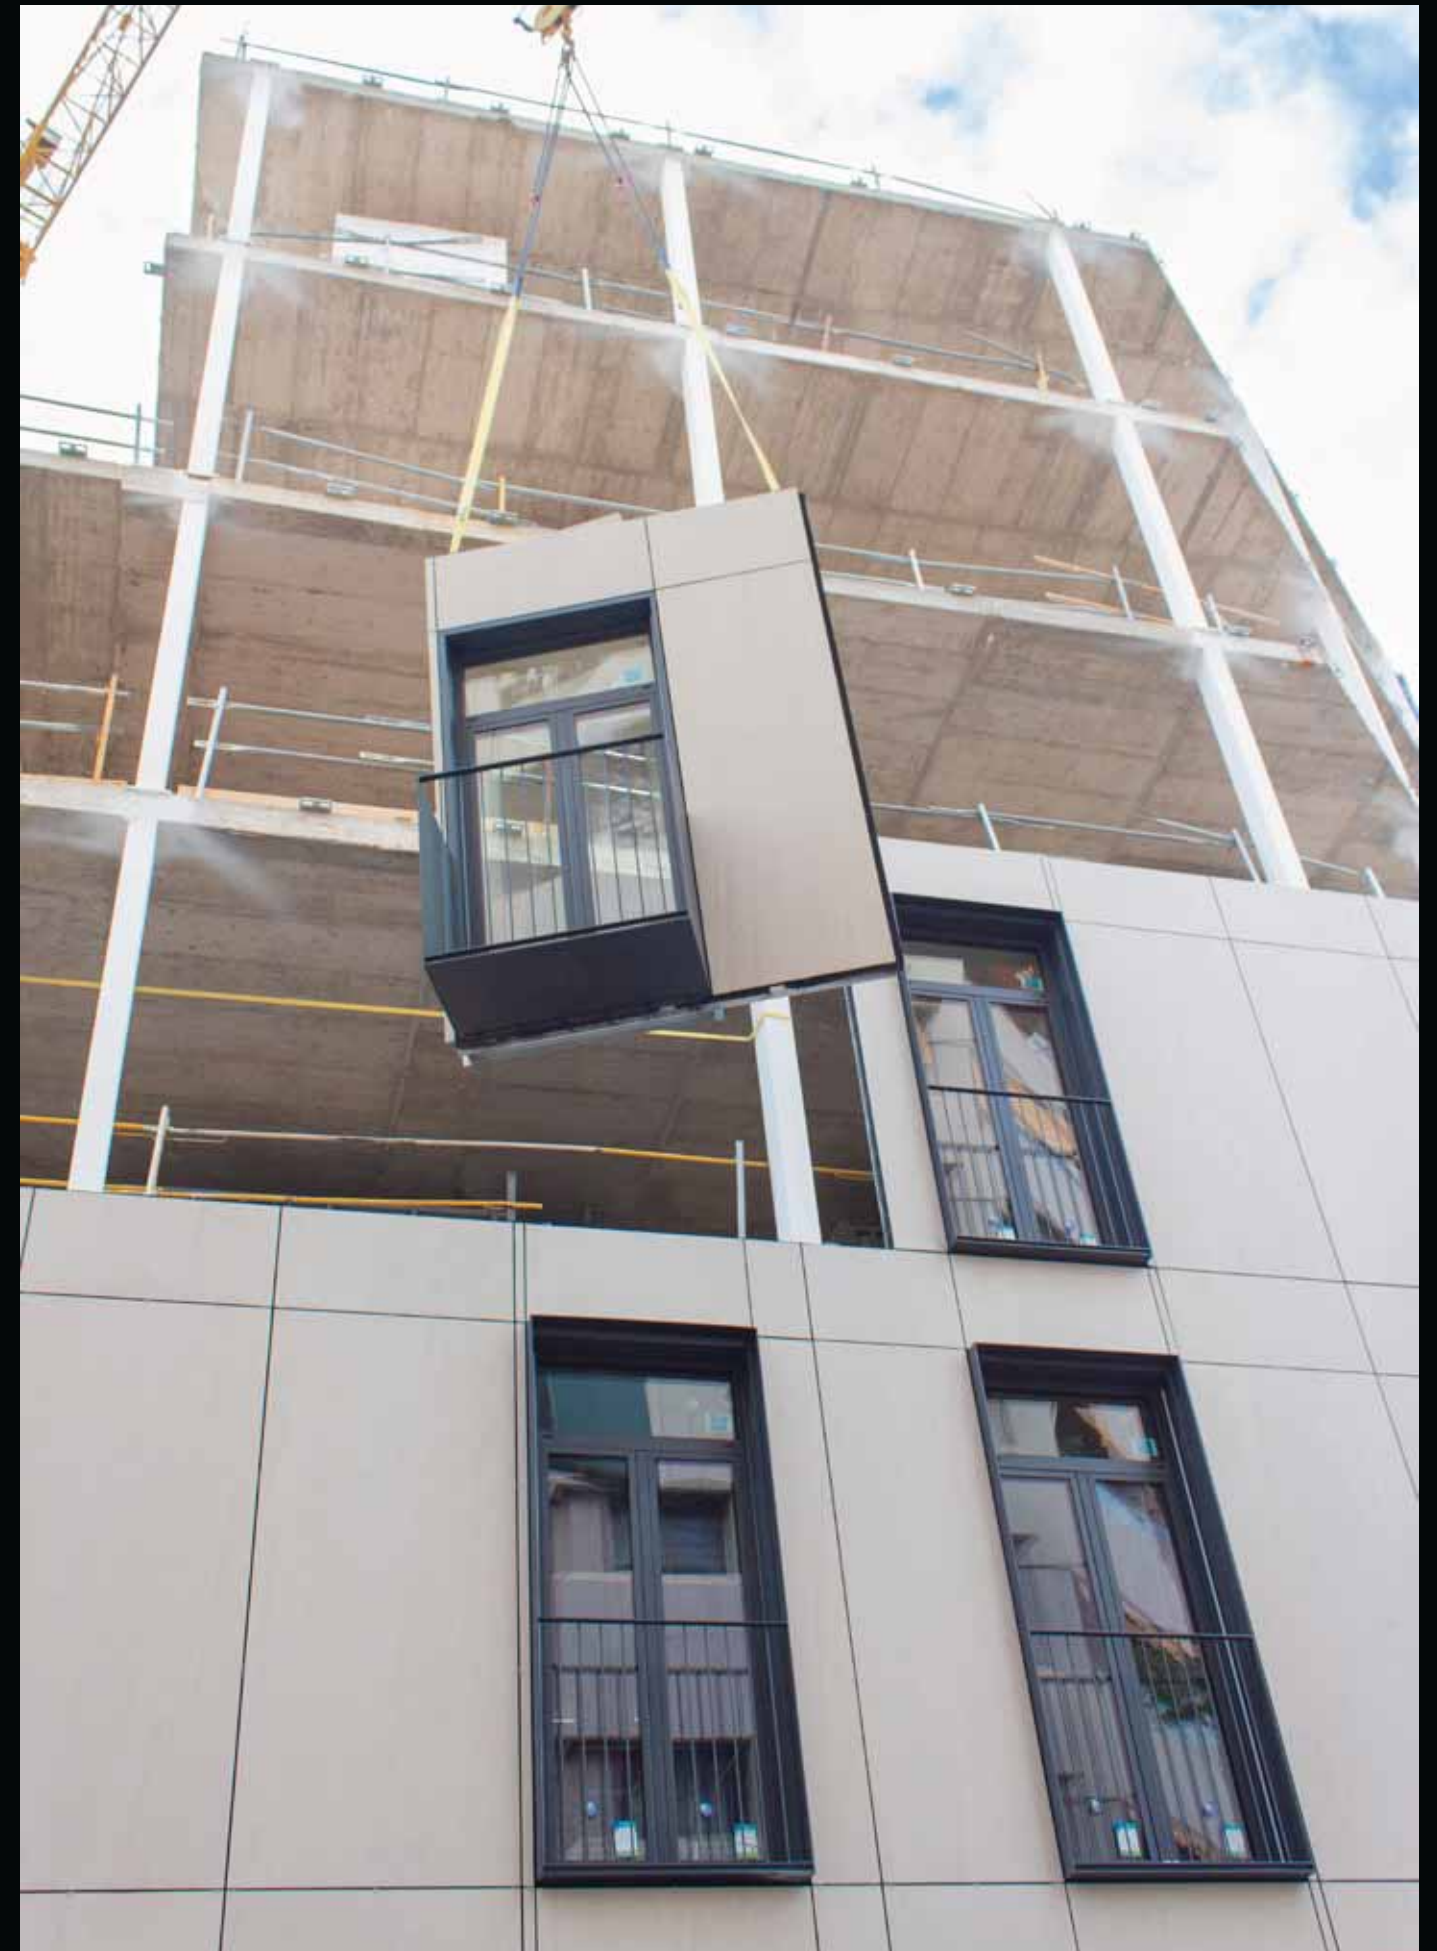

The modules are anchored to the upper floor using anchoring plates that allow for adjustments in all three Cartesian axes to absorb structural deviations. Furthermore, the modules are anchored to each other on its perimeter by means of tying plates. There is also the option to include windows, glass, and their finishes.

Our technical department will collaborate with the project drafting team to help define the necessary module types based on the project's requirements.

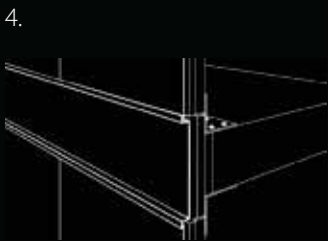

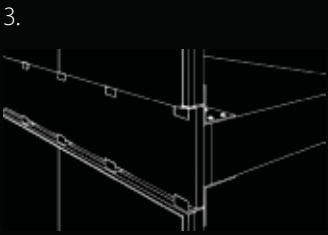

WHAT DO WE OFFER?

Standardised modular façade offers a modular façade solution already defined based on industrial efficiency and repeatability, relying on a closed catalogue of modules that reduces the design phase and optimises the manufacturing and installation processes.

Standardisation allows for shorter execution times, costs defined from the early stages and consistent quality, facilitating a more reliable project planning. All this while maintaining the technical and aesthetic performance of the system and offering compositional flexibility through the combination of blind panels and panels with openings, with fixed or casement windows.

INSTALLATION

1. Installation of industrialised ceramic modules between floor slabs.
2. Installation of insulation and laquered metal finishing panel covering the slab edges.
3. Installation of supports for subsequent placement of the closure panel on the slab edge.
4. Assembly of panel on slab edge, completing the closure of the façade.
